

Ex.No. 15: AI-based Traffic Prediction for 5G Networks

AIM:

To develop and simulate an AI-based traffic prediction model for 5G networks using MATLAB and evaluate its performance in terms of Prediction Accuracy (%), Mean Squared Error (MSE), and Network Throughput (Mbps).

Objective:

1. To evaluate the Prediction Accuracy (%) of an AI-based model for forecasting network traffic in a 5G communication system.
2. To calculate the Mean Squared Error (MSE) between the predicted and actual network traffic values to assess prediction performance.
3. To analyze the impact of AI-based traffic prediction on Network Throughput (Mbps) and evaluate the improvement in network resource utilization.

RESULT :

1. The AI-based traffic prediction model achieved high Prediction Accuracy (%), demonstrating its effectiveness in forecasting 5G network traffic patterns.
2. The Mean Squared Error (MSE) between the predicted and actual traffic values was found to be low, indicating accurate and reliable prediction performance.
3. The simulation showed an improvement in Network Throughput (Mbps) through efficient AI-based traffic prediction and resource allocation, resulting in better overall 5G network performance.
